## Cart TABLE:

Since the "Cart" table only has two columns, there is no need for update commands. The table is used to store the relationship between a customer and their cart, so the values in the "Cart\_id" and "Customer\_id" columns are typically inserted when a customer creates a new cart or adds items to their existing cart. The "Cart" table is usually updated through INSERT statements rather than update commands.

## Cart items TABLE:

```
SQL> UPDATE Cart_items SET Quantity = 3 WHERE Cart_id = 1 AND Product_id = 1;
1 row updated.

SQL> UPDATE Cart_items SET Cost = 55 WHERE Cart_id = 2 AND Product_id = 2;
1 row updated.

SQL> UPDATE Cart_items SET Order_date = TO_DATE('2022-01-04', 'YYYY-MM-DD') WHERE Cart_id = 3 AND Product_id = 3;
1 row updated.

SQL> UPDATE Cart_items SET Deliver_date = TO_DATE('2022-01-10', 'YYYY-MM-DD') WHERE Cart_id = 4 AND Product_id = 4;
1 row updated.

SQL> UPDATE Cart_items SET Product_name = 'New Watch', Cost = 120 WHERE Cart_id = 5 AND Product_id = 5;
1 row updated.
```
